INTRODUCING THE NEW

# BRYSTON

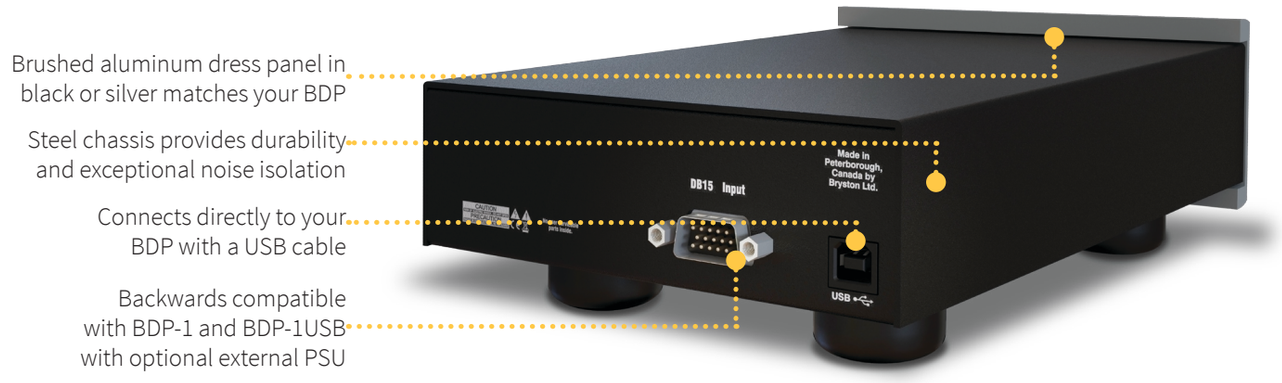
## BOT-1 Bryston Optical Transport

**ADD CD RIPPING & PLAYBACK** to your BDP Bryston Digital Player simply by connecting our new BOT-1. By reusing the bit-perfect audio engine designed for high-resolution file playback, we can give you the same audible results with CD playback. CDs are temporarily ripped into the player's RAM where they are read just as if they were stored on a hard drive!

Bit-perfect ripping is made simple by our built in interface which automatically looks up CDs, populates track details and album art, and stores them in neatly organized folders on either locally attached or NAS drives.

**COMPATIBILITY** With the BDP-2, it's built in. BDP-1 or BDP-1USB owners can use the BOT-1 with the addition of our matching out-board Bryston Power Supply, the BPS-3 which independently powers the BOT-1 in order to leave plenty of current left for other USB attached drives.

# **RIP** WITH CONFIDENCE
# **PLAY** WITH EASE



## No Computer Necessary

- CDs play from the same “Media Player” web-app from which files play. Or, they appear as a playlist in 3rd party apps such as MPad or MPDroid.
- CDs are automatically recognized by an internet lookup.
- Edit metadata directly from your tablet, smartphone or computer.
- Rip to locally attached or network attached storage - where ever you currently store your digital files.
- Play without ripping. CDs can be played in real time without the need to rip them to your drives. Great for sampling friends’ music!
